

Introducing the future of drug safety. Cora PVAI.

Genpact Cora PVAI – Solution Overview

Cora PVAI maximizes the value of automation across the PV information value chain

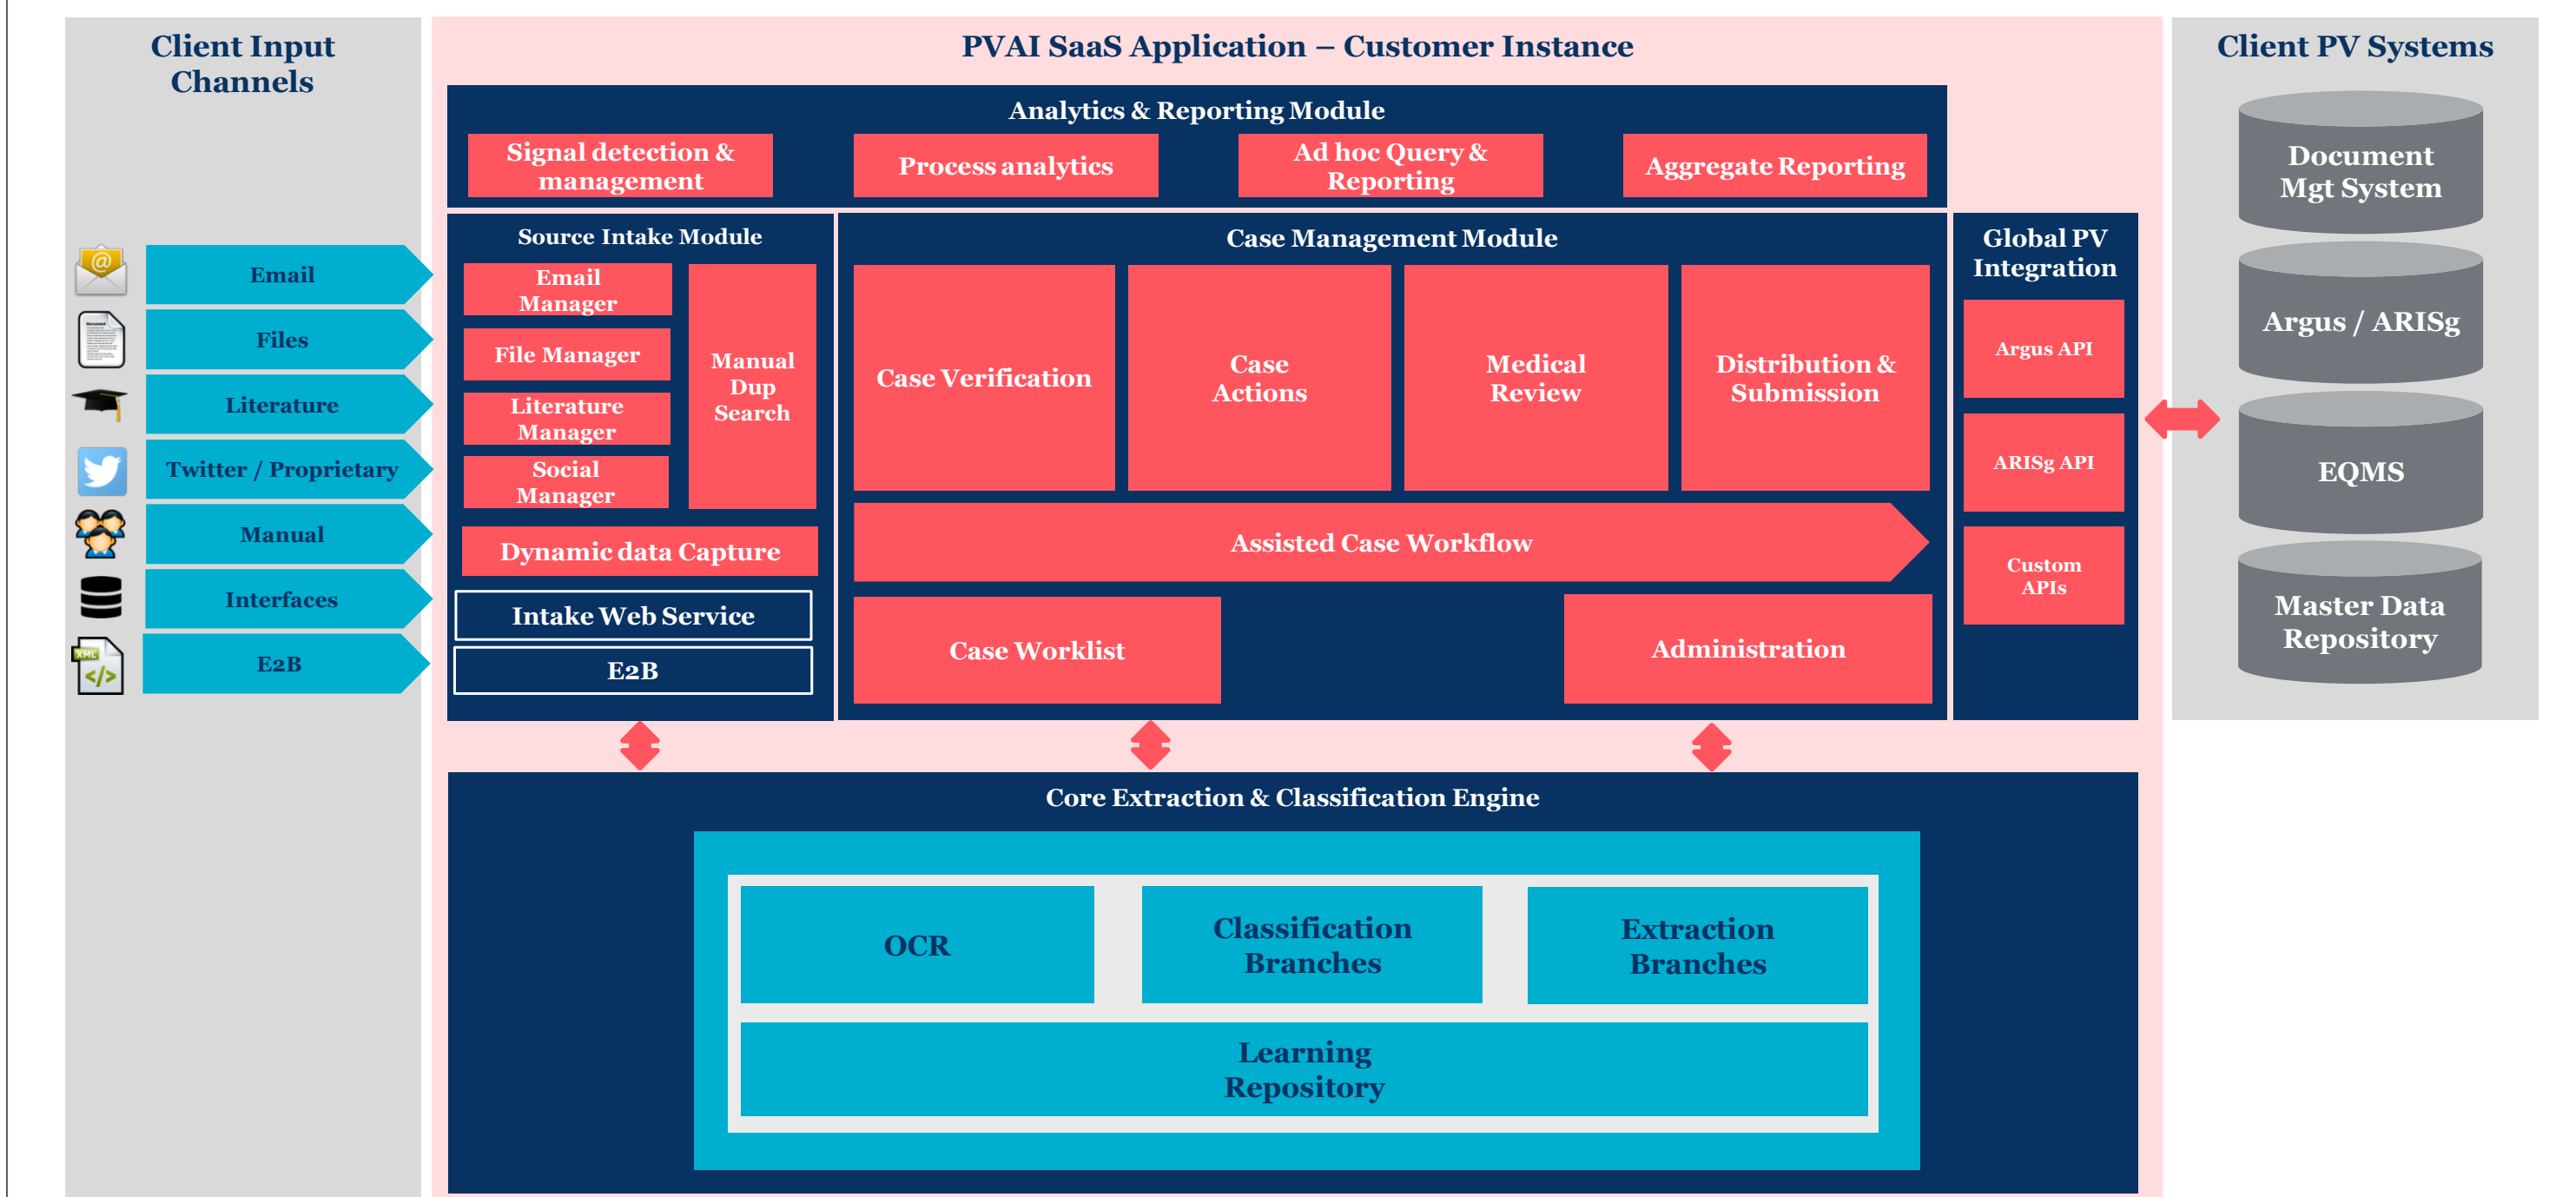

- Transformational PV Solution
- Industry-leading Performance
- Machine Learning
- Innovative User Interface
- Risk-Based Processing
- Argus / ArisG / Custom Integration

Innovative User Interface – purpose-designed for AI paradigm

Pushing extracted data directly into a legacy system without human review would give a poor user experience and undermine much of the efficiency gains from automation...

Highly efficient One-Touch processing

Case Verification - A completely redesigned user experience for reviewing and training the XCE

The output from the Extraction and classification engine is presented to the user in a novel, three-pane window, with a focused list of actions for human review. Updates to the information is fed back to the XCE for continuous learning

Maximizing the value of Touchless and One-Touch processing

Purpose built integration with legacy systems to overcome limitations of E2B and realize the full value of automation

To realize the full benefits of the PVAI solution, the following information is exchanged between PVAI and legacy systems:

- **Complete Case Data Set** – all potential fields captured in legacy system related to the AE Case (including assessment data, configured meta data, case types etc.)
- **Case Documentation** – including source documents, follow-up letters etc.
- **Operational Data and Workflow Status** – including audit trails, case action items, case communications logs, priority and case due dates

Initial Operating Model

PVAI will automate most of the current case processing workflow, driving significant benefits even if 100% of cases are reviewed.

Current Process on Legacy System
